

Matheus Moreira Ferreira

Curitiba, Brazil | matheus.cll.g@gmail.com | linkedin.com/in/matheus-m-ferreira | github.com/matheus-mf

Summary

Over 8 years developing software for national and international companies across various industries. I have built solutions ranging from MVPs to scaled products, always focused on performance and quality. I go beyond the technology stack – I deeply understand products and their markets to deliver real business value.

Experience

Full Stack Software Engineer | Project Manager, Tog Lab (Tog Design) – Remote July 2024 – present

- Development and maintenance of features for client and sales management in a financial system for the agribusiness market
- Backlog management and coordination of a multidisciplinary team as project manager
- Co-creation of product and definition of strategic solutions aligned with agribusiness demands
- Full stack work covering the full seller journey through financial institution intermediation
- Stack: React, TypeScript, Node.js, PostgreSQL, SQL

Senior Full Stack Software Engineer, NEES - Center of Excellence in Social Technologies June 2024 – present
– Remote

- Back-end feature development for a school management system serving all Brazilian public school networks
- Support to the database team on data modeling and structuring
- Collaboration with the infrastructure team on deployment and release processes
- Work with the requirements team on project activity prioritization and evaluation
- Stack: Node.js, Python, PostgreSQL, Clean Architecture, Docker, Swagger

Full Stack Software Engineer, DiTi Performance – Remote Dec 2022 – Apr 2024

- Development of an SEO performance analysis and metrics system for a leading multinational retailer
- Integration with multiple Google Stack APIs (Search Console, Analytics, Merchant Center)
- Definition of architectural patterns and implementation of Clean Architecture across back-end and front-end
- Development of serverless automated systems on AWS focused on scalability
- Stack: Node.js, TypeScript, AWS Lambda, Serverless, Google APIs, Clean Architecture

Full Stack Software Engineer, NEES - Center of Excellence in Social Technologies – Apr 2022 – Jan 2023
Remote

- Development of scalable software for over 26,000 students and teachers in Brazilian public schools
- Creation of a React JS component library adopted by 20+ developers across distinct projects
- Definition of architectural patterns and adoption of Clean Code and Clean Architecture best practices
- Projects aimed at recovering learning loss caused by the COVID-19 pandemic
- Stack: React, Node.js, Python, PostgreSQL, Swagger, Docker

Full Stack Software Engineer, Vetta – Brazil

Dec 2021 – Nov 2022

- Development of energy efficiency and sustainability systems for some of the world's largest metallurgical companies
- Creation of frontend components following SOLID principles with list virtualization, improving performance and maintainability
- Development of endpoints with statistical calculations for visualization in interactive tables and charts
- Stack: React, TypeScript, Node.js, PostgreSQL

Software Engineer Trainee - Junior - Full Stack, Tog Design – Dois Vizinhos, Brazil

Sept 2019 – Dec 2021

- Creation of a React JS component library with usage documentation to standardize across projects
- Development of React micro frontends for a leading company in preventive and diagnostic medicine in Brazil
- Implementation of web projects on Linux servers with Docker and Nginx
- Progressed from Trainee to Junior and Full Stack over 2 years and 4 months at the same company
- Stack: Vue.js, React, TypeScript, Node.js, Docker, Tailwind CSS, PHP, Nginx

Software Engineer Trainee, Pinha Digital – Dois Vizinhos, Brazil

Apr 2019 – Sept 2019

- Development of the responsive catalog system for Grupo Doce D'oce (frozen food company)
- Collaboration in defining behaviors and graphic interfaces for national and international projects
- Maintenance of the Accord Iluminacao system: new page implementation and bug fixes
- Stack: HTML/CSS, JavaScript, Vue.js, Bootstrap

Featured Projects

GPE (MEC) - School Management Platform

Jan 2025

- Brazilian Federal Government platform modernizing public school management, automating enrollment, class assignment, and digital class records
- Acted as developer and technical lead for the system integrated with the national educational database
- Stack: React, Next.js, PostgreSQL, Python, Django, AWS

SEO Performance Analytics Dashboard

Jan 2023

- SEO metrics system for a major multinational retailer integrating multiple Google Stack APIs
- Monitored page performance, keyword rankings, and conversion rates in an interactive dashboard
- Stack: React, Node.js, Serverless, AWS Lambda, DynamoDB, Google APIs

NeeDS - Component Library

Jan 2022

- Design system inspired by the Brazilian Federal Government identity, adopted by 10+ teams and published on npm
- Eliminated redundant component recreation across the entire organization ecosystem
- Stack: React, Chakra UI, NPM

Technical Skills

Frontend: React, Next.js (95%), TypeScript/JavaScript (92%), Vue.js (88%), Chakra UI, Storybook

Backend: Node.js/NestJS (85%), Django/Express.js (80%), REST API, Prisma, JWT

Cloud & DevOps: AWS - S3, Lambda, EC2, RDS, CloudWatch (76%), Docker (78%), Git/GitFlow (90%), GitHub Actions

Databases: PostgreSQL (82%), Redis, DynamoDB, MariaDB, Firebase

Languages: TypeScript, JavaScript, Python (82%)

Best Practices: Clean Architecture, SOLID, TDD, Scrum, Code Review, CI/CD

Soft Skills

Competencies: Team Leadership, Clear Communication, Adaptability, Problem Solving, Agile Methodologies, Systemic Thinking
